CURRENT FOCUS

Industrial commercial workflows
Data pipelines
Applied technical training

Systems builder with a mechanical engineering foundation, focused on turning repetitive, document-heavy operations into maintainable workflows. Builds with Python, APIs, n8n, databases, and structured AI extraction while keeping experienced people in control of commercial decisions. Also teaches practical automation and systems literacy to nontechnical professionals.

Selected Systems

SCOPE STATED EXPLICITLY

REF. DS-003

PROTOTYPE

Industrial RFQ Intake & Specification Preparation

Structures line items, part specifications, quantities, and delivery terms from email, PDF, and spreadsheet inputs into a human review queue.

Target outcome: reduce estimator preparation from 25 minutes to under 3 minutes of focused verification.

REF. DS-004

PROTOTYPE

Multi-Portal Tender Discovery & Filter Queue

Monitors fragmented procurement portals, detects new notices, extracts requirements, and filters opportunities against defined capability criteria.

Designed to replace 10+ hours of weekly manual portal checking with a consolidated opportunity brief.

REF. DS-005

INTERNAL BUILD

Commercial Quotation Coordination & Follow-Up

Tracks approved quotes, customer engagement, follow-up timing, and reporting without forcing sales teams into heavyweight CRM administration.

Keeps quotation status and follow-up prompts visible in one lightweight operational record.

REF. DS-001

INTERNAL BUILD

Million-Row Data Processing Pipeline

Chunked Python and Polars workflow for normalization, validation, deduplication, and Parquet export beyond spreadsheet limits.

Processed 1.14M+ rows in 8 minutes 42 seconds with zero dropped rows in the documented run.

REF. DS-006

TRAINING

Practical AI, Automation & API Curriculum

Hands-on modules covering workflow mental models, API anatomy, webhooks, structured AI outputs, validation, and responsible error handling.

Designed for professionals who need to build and reason about working systems—not only operate software interfaces.

Experience

OPERATIONS / TEACHING / AUTOMATION

Independent Systems Builder 2025 — Present Ibadan / Remote	Workflow Automation & Technical Delivery - Map operational processes and build targeted automations for intake, data routing, reporting, CRM/ERP support, and staff handover. - Combine no-code orchestration with Python, databases, webhooks, and APIs according to reliability and maintenance needs. - Produce plain-language documentation and practical training so teams can operate delivered workflows confidently.
AppClick Technology Current Technical instruction	Applied AI & Automation Instructor - Teach practical systems literacy across APIs, automation logic, data handling, webhooks, and AI-assisted workflows. - Translate technical concepts into project-based sessions for learners with varied backgrounds.
New Edition International Schools 2021 — 2023 2024	Technology Teacher & IT Trainer - Designed and delivered Basic Technology instruction, adapting material to different learner levels and assessment results. - Introduced UiPath and UI.vision automation for repetitive administrative document workflows and trained staff to operate the systems. - Produced structured guides supporting continued use after training.
Dangote Cement PLC Sep 2023 — Jun 2024 Ibese Plant	NYSC Trainee - Worked within a large industrial operating environment with structured safety, reporting, and cross-departmental communication practices. - Developed direct familiarity with the discipline and coordination required in industrial operations at scale.
Earlier Automation & Product Work 2022 — 2024	Research, Data Automation & UX - Built automated research workflows for Deevamart / Flogram and delivered structured usability feedback and interface copy for Easit Technologies. - Built a personal data pipeline for 700,000+ rows of broker data using RPA, cloud virtual machines, Excel automation, and Python-assisted processing.

Capabilities

PRACTICAL WORKING STACK

Workflow Automation n8n · Make.com · Zapier · UiPath · UI.vision · process mapping · exception handling	Data & Engineering Python · Polars · Excel / Google Sheets · PostgreSQL · MySQL · MongoDB · data validation
Integration REST APIs · webhooks · structured JSON · email/document intake · CRM and Odoo ERP support	Training & Enablement Curriculum design · project-based instruction · technical documentation · staff handover

Education & Development

FOUNDATION AND CONTINUED LEARNING

B.Eng. Mechanical Engineering Federal University Oye-Ekiti · Second Class Lower · CGPA 3.22/5.00	2018 — 2023
--	-------------

HNG Internship — No-Code Automation Track References available on request · Updated 2026	2024
