

ODAFE ANTHONY AMALEGA

Instrumentation Technician

Lagos, Nigeria | anthonyodafe8@gmail.com | +234 814 879 4458 | NYSC: Completed

PROFILE

Mechanical Engineering graduate with direct plant-floor exposure to PLC-controlled instrumentation at Dangote Cement. Developing PLC programming skills in ladder logic and structured text, supported by hands-on experience in equipment maintenance, schematic reading, component repair, and safety-critical industrial environments. Seeking to grow within a specialist instrumentation and control organisation.

CORE COMPETENCIES

- PLC Systems: Ladder Logic and Structured Text (actively developing)
- Industrial instrumentation: sensors, actuators, and automated control systems
- Schematic and diagram interpretation (P&IDs, engineering drawings)
- Preventive and corrective maintenance on production equipment
- Component fitting, repair, and replacement to engineering tolerances
- Calibration principles: sensors, gauges, and process transmitters
- Technical documentation and maintenance record-keeping
- Safety protocols, PPE compliance, and hazard awareness
- AutoCAD and Autodesk Inventor
- UiPath RPA and general automation logic

WORK EXPERIENCE

NYSC Trainee, Plant and Mechanical Engineering

Sept 2023 – June 2024

Dangote Cement PLC, Ibese Plant

- Operated alongside engineers on a live production line running PLC-driven control systems, gaining direct exposure to instrumentation managing conveyors, sensors, and process equipment.
- Read and interpreted engineering schematics and P&ID diagrams to support equipment inspections and troubleshooting across multiple production areas.
- Performed measurements, part alignments, and component inspections to support routine and preventive maintenance tasks.
- Assisted in identifying and escalating control system faults, contributing to reduced production downtime.
- Maintained strict PPE and heavy machinery safety protocols throughout all field operations.

Industrial Trainee

2019

Techoquip

- Led full mechanical assembly and modification of a plastic bottle crusher, including welding, grinding, and component fitting to tolerance.
- Deepened practical understanding of machine dynamics, mechanical systems, and workshop practices.

Basic Technology Teacher and IT Personnel

2021 – 2023

New Edition International Schools

- Maintained accurate, time-critical technical documentation including timetables, rosters, and examination records.
- Improved documentation workflows using generative AI tools, significantly reducing preparation time.

EDUCATION

B.Eng. Mechanical Engineering, Second Class Lower

2023

Federal University Oye-Ekiti | CGPA 3.22

TECHNICAL SKILLS

Control and Automation: PLC Programming (Ladder Logic, Structured Text), UiPath RPA, Control System Familiarisation

Design and Engineering: AutoCAD, Autodesk Inventor, Schematic Interpretation, P&ID Reading

Fabrication and Maintenance: Welding, Grinding, Component Fitting, Fault Diagnosis, Preventive Maintenance

Software and Productivity: Microsoft Office, Google Workspace, Python, JavaScript, Generative AI Tools
